

ABSTRACT

The present invention provides a method for producing a  
fluorine-containing halide, comprising reacting a fluorine-  
5 containing sulfonyl halide or fluorine-containing disulfonyl  
chloride with a metal halide or metal component in the present or  
absence of a solvent. In accordance with the present invention, a  
fluorine-containing bromide, fluorine-containing iodide or  
fluorine-containing chloride can be readily produced in high  
10 yield at low cost, using an industrially advantageous process.
